12. In 1795, **before examining the evidence**, the deist James Hutton, 'the father of modern geology', proclaimed: 'the past history of our globe **must be explained** by what can be seen to be happening now ... No powers are to be employed that are not natural to the globe, **no action to be admitted** except those of which we know the principle' (emphasis added)—uniformitarianism. This is a not a refutation of Biblical teaching of Creation and the Flood, but a dogmatic refusal to consider them as even possible explanations. Shortly after Darwin

The new doctrine of the 'survival of the fittest' is urged by Herbert Spencer, Darwin, and many naturalists as an alternative more rational than that of 'design'. This at present is admitted by its advocates to be a bare hypothesis, demanding many postulates, and leaving many broken links; e.g. the 'first germs', the introduction of sensation, the beginnings of organs, intelligence, volition, moral obligation, necessary ideas, etc.

Johnson's New Universal Cyclopaedia
(1st Edition), Vol II
p. 585, 1875.

His story starts in Genesis

The mentality of the whole Scripture ... is that creation is as historically real as the history of the Jews and our own present moment of time. Both the Old and the New Testaments deliberately root themselves back into the early chapters of Genesis, insisting that they are a record of historical events.
